Power regression Calculator

Analyzes the data table by power regression and draws the chart.

Power regression: $y=Ax^B$

(input by clicking each cell in the table below)

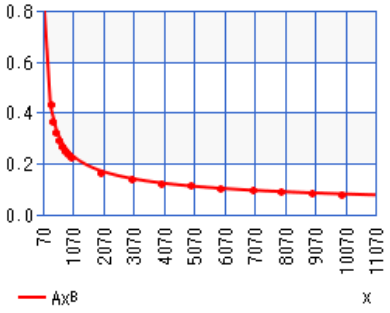
function	value
mean of x	1,920.979764
mean of y	0.1738025013
correlation coefficient r	-0.99898374
A	5.6549095
B	-0.460593616



Guidelines for interpreting correlation coefficient r :

0.7＜|r|≦1 strong correlation
0.4＜|r|＜0.7 moderate correlation
0.2＜|r|＜0.4 weak correlation
0≦|r|＜0.2 no correlation

Power regression

(1) *mean*: $\overline{lnx}=\frac{\sum lnx_i}{n}$, $\overline{lny}=\frac{\sum lny_i}{n}$

(2) *trend line*: $y=Ax^B$, $B=\frac{Sxy}{Sxx}$, $A=e^{\overline{lny}-B\overline{lnx}}$

(3) *correlation coefficient*: $r=\frac{Sxy}{\sqrt{S_{xx}}\sqrt{S_{yy}}}$

$$S_{xx}=\frac{\sum(lnx_i-\overline{lnx})^2}{n}=\frac{\sum lnx_i^2}{n}-\overline{lnx}^2$$

$$S_{yy}=\frac{\sum(lny_i-\overline{lny})^2}{n}=\frac{\sum lny_i^2}{n}-\overline{lny}^2$$

$$S_{xy}=\frac{\sum(lnx_i-\overline{lnx})(lny_i-\overline{lny})}{n}=\frac{\sum lnx_i lny_i}{n}-\overline{lnx}\,\overline{lny}$$
